

**AMENDMENTS TO THE CLAIMS**

Kindly CANCEL claims 21 through 27 and claims 35 through 38, without prejudice.

Kindly AMEND claims 28 through 34, as suggested by the Examiner in the Office Action, as follows:

21. (Canceled) ~~A wiper system for a truck mirror comprised of~~  
~~—— a pneumatic cylinder configured for attachment to a compressed air source, said~~  
~~pneumatic cylinder having an operating arm that is extendable and retractable, a stroke of~~  
~~approximately the width of the mirror and being configured for front mounting;~~  
~~—— a mounting bracket for attaching the pneumatic cylinder to an exterior surface of~~  
~~the mirror, the mounting bracket being an angled member configured for attachment to the front~~  
~~of the pneumatic cylinder, positioning the front of the pneumatic cylinder abutting a first vertical~~  
~~side of the mirror, and attachment to an exterior surface of a backside of the mirror, wherein the~~  
~~operating arm extends from the first vertical side toward the second vertical side during~~  
~~extension; and~~  
~~—— a clamping member configured for attaching a wiper blade to the operating arm.~~
22. (Canceled) ~~A wiper system according to claim 1, further comprising a switch for~~  
~~selectively controlling a flow of compressed air to the pneumatic cylinder.~~
23. (Canceled) ~~A wiper system according to claim 1, further comprising at least one air~~  
~~line configured for supplying compressed air to the pneumatic cylinder.~~
24. (Canceled) ~~A wiper system according to claim 1, wherein the pneumatic cylinder is a~~  
~~double action cylinder.~~

25. (Canceled) ~~A wiper system according to claim 1, wherein the pneumatic cylinder is a single action cylinder.~~

26. (Canceled) ~~A wiper system according to claim 2, wherein the switch is configured to manually control extension and retraction of the operating arm of the pneumatic cylinder.~~

27. (Canceled) ~~A wiper system according to claim 2, wherein the switch is configured to automatically control extension and retraction of the operating arm of the pneumatic cylinder.~~

28. (Currently Amended) A wiper system mounted to a truck mirror, the wiper system comprised of

a mirror;

a pneumatic cylinder configured for attachment to a compressed air source, said pneumatic cylinder having an operating arm that is extendable and retractable, a stroke of approximately the width of the mirror and being configured for front mounting;

a mounting bracket for attaching the pneumatic cylinder to an exterior surface of the mirror, the mounting bracket being an angled member ~~configured for attachment~~ attached to the front of the pneumatic cylinder, positioning the front of the pneumatic cylinder abutting a first vertical side of the mirror, and ~~attachment~~ attached to an exterior surface of a backside of the mirror, wherein the operating arm extends from the first vertical side toward the second vertical side during extension, and

a clamping member configured for attaching a wiper blade to the operating arm.

29. (Currently Amended) A wiper system according to claim 9 ~~28~~, further comprising a switch operably coupled to the pneumatic cylinder and configured for selectively controlling a flow of compressed air to the pneumatic cylinder.

30. (Currently Amended) A wiper system according to claim ~~10~~ 29, further comprising at least one air line configured for supplying compressed air to the pneumatic cylinder.

31. (Currently Amended) A wiper system according to claim ~~11~~ 30, wherein the pneumatic cylinder is a double-action pneumatic cylinder.

32. (Currently Amended) A wiper system according to claim ~~11~~ 30, wherein the pneumatic cylinder is a single-action pneumatic cylinder.

33. (Currently Amended) A wiper system according to claim ~~14~~ 32, wherein the switch is configured for manual control of extension and retraction of the operating arm of the pneumatic cylinder.

34. (Currently Amended) A wiper system according to claim ~~14~~ 32, wherein the switch is configured for automatic control of extension and retraction of the operating arm of the pneumatic cylinder.

35. (Canceled) ~~A wiper system mounted to a truck mirror, the wiper system comprised of  
—— a pneumatic cylinder operably coupled to a compressed air source, said pneumatic  
cylinder having an operating arm that is extendable and retractable, having a stroke of  
approximately the width of the mirror and being configured for front mounting;  
—— a low profile means for mounting the pneumatic cylinder to the mirror, said  
means for mounting the pneumatic cylinder to the mirror being attached to the front of the  
pneumatic cylinder and positioning the front of the pneumatic cylinder adjacent to or abutting a  
vertical side of the mirror; and  
—— a means for mounting a wiper blade to the operating arm.~~

36. (Canceled) ~~A wiper system according to claim 17, further comprising a means for selectively controlling a flow of compressed air to the pneumatic cylinder.~~

37. (Canceled) ~~A wiper system according to claim 17, wherein the means for mounting the pneumatic cylinder to the mirror is attached to the backside of the mirror.~~

38. (Canceled) ~~A wiper system according to claim 14, wherein the means for selectively controlling a flow of compressed air to the pneumatic cylinder is configured for manual or automatic control of extension and retraction of the operating arm of the pneumatic cylinder.~~
